Tennessee Wildlife Resources Agency
Region IV
3030 Wildlife Way
Morristown, Tennessee 37814

All activities covered in this report were conducted under the following TWRA cost centers: 4311, 4312 and 4313. Development of this report was financed in part by funds from Federal Aid in Fish and Wildlife Restoration (Public Law 91-503) as documented in Federal Aid Project FW-6.

This program receives Federal Aid in Fish and Wildlife Restoration. Under Title VI of the Civil Rights Act of 1964 and Section 504 of the Rehabilitation Act of 1973, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, or disability. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to:

Melton Hill Reservoir – 2006

Largemouth Bass

Population Parameter	Annual Rating	Measure	Gear	Value
Recruitment	Excellent	Substock CPUE (per hr)	Electrofishing	40.7/hr
Structure	Poor	PSD	Electrofishing	32
Density	Excellent	CPUE \geq Stock Size (203 mm) (per/hr)	Electrofishing	82.7/hr
	Fair	CPUE \geq Minimum Size Limit (356 mm) (per hr)	Electrofishing	11.6/hr
Angling Pressure*	Fair	Fishing Effort (hr)	Creel Survey	43,691 hr
Fishing Success	Good	Angler Catch Rate (per hr)	Creel Survey	1.3/hr
Value of Fishery*	Fair	Trip Expenditures (\$)	Creel Survey	\$188,940

*all black bass

Fishery Forecast: Excellent recruitment of the 2001-2005 year classes will continue to improve the density of the fishery for the next several years. The electrofishing catch rate of greater than 356 mm largemouth is less than ideal.

Management Recommendations: A 356 mm creel limit was imposed in 2002 in response to the very low catch rates of preferred size largemouth bass. It appears that this regulation has had little effect on improving the size structure of the population and we are in the process of evaluating other possible solutions to this issue.

White Crappie

Population Parameter	Annual Rating	Measure	Gear	Value
Structure	Good	PSD	Electrofishing	96
Density	Good	CPUE \geq Stock Size (127 mm)	Electrofishing	24.7/hr
	Good	CPUE \geq Minimum size limit (254 mm)	Electrofishing	14.7/hr
Angling Pressure	Fair	Fishing Effort (hr)	Creel Survey	16,141 hr
Fishing Success	Good	Angler Catch Rate (per hr)	Creel Survey	0.9/hr
Value of Fishery	Good	Trip Expenditures (\$)	Creel Survey	\$47,330

Fishery Forecast: The white crappie population appears to be doing very well. A creel clerk has been working on the reservoir since the beginning of 2002 which will continue to provide valuable information concerning the fishery that can not be obtained through electrofishing alone.

Management Recommendations: No changes in creel limits are planned for the future.
